

Alfa – Sustainable mobility in action

*Alfa wants to be the leading Scandinavian mobility services company.
Our vision is to deliver sustainable global mobility for people and businesses.*

Load factor makes a difference for the climate

Alfa has had a long term environmental objective to increase the load factor of European moves. We continuously work with improvements regarding coordination of moves, cooperation with partners and finding the best transport modes.

Improving load factor is a win-win for Alfa, our customers and our vendors. It reduces climate footprint and air emissions, it improves cost efficiency and enables competitive prices.

Reducing climate footprint of travel

Our ambition is to use digital solutions for meetings and surveys, when possible. When going by car, trips are to a large extent carried out in eco cars. Our car fleet primarily consists of biogas, electric and plug-in hybrid cars.
